

Preliminary Instructions for 6.034 Demonstrations

General

The Java™ Runtime Environment (JRE) needs to be installed on your computer before running the demonstrations. To install this application, visit the Java Web Start Technology website at: <http://java.sun.com/products/javawebstart/>.

Once Java Web Start is downloaded to your local computer, the application will constantly check for the most current version of JRE and for updates to the application.

Beginning the Program

1. Clicking on JNLP link to run the demonstration displays a start up screen that asks if you want to open the application or 'Save to Disk.' Click Open and then OK.
2. A Security screen will appear that asks 'Do you want to run the application?' Click Run.
3. Once the 6.034 demonstration screen appears, click on one of the topics in the left navigation bar to explore the various demonstrations. Some of the topics have subtopics that will appear. For example, the Learning demonstration has a list of five subtopics that appear after being clicked.
