

CMSC 124 COBOL Exercise 2

Create a COBOL program that manages the users' ATM account. The program should have a main menu:

- Create a new account - The user should provide the following information:
 - Name - 20 characters long
 - Birthday
 - Pin - 4 digits
- Log in to an existing account - The user can use the following functionalities:
 - Edit account
 - Delete account
 - Deposit
 - Withdraw

Guidelines:

- A maximum of 5 accounts can be created. The program should prompt the user if the record is already full.
- An initial deposit of 500 pesos will be transacted upon creation of a new account.
- The information of the users should be saved in a file named **ACCOUNTS.DAT**.
- After every transaction, the user will be asked if he/she wants another transaction. If the user does not want another transaction, the user will be automatically logged out and the program will go back to the main menu.
- The file should be updated every after a user logs out.
